This project is almost done. I need a little help to complete the project. I have learned a lot (while sticking to a lot of dem and at work:)). Thus I have drifted along with mentors or instructors. Which is my desired mode of operation and not a problem for me. And I beg your continued patience.

But the following problem has stumped me for almost a month! I have two fairly similar requests one to wikipedia and one to the nsf (National Science Foundation data.gov) site.

While the wiki one works the nsf one does not!

```
var nsfURL = 'http://api.nsf.gov/services/v1/awards.json?keyword='+ query1;
var nsfRequestTimeout = setTimeout(function(){
  $nsfElem.text("failed to get nsf resources");
}, 8000);
$.ajax({
  url: nsfURL,
  dataType: "json",
  jsonp: "callback",
  success: function (response) {
    var awardList = response;
    console.log(awardList);
    for (var i in awardList.award) {

      $nsfElem.append('<li>' + awardList.award[i] + '</li>');
    }; clearTimeout(nsfRequestTimeout);
  }
});
```

When I run this I can see that the response object is assigned to awardList and the content is downloaded under the network traffic tab. I do not able to access the awards in the response object!!

Hi there

If you look closely at `awardList` in the `console`, it has a `response` object that contains the `award` array.

So you should access `award` by implementing `awardList.response.award`

In the future, if you need help with any issues that came up during your work process that stop you from completing the project, please reach out to:

- [Discussion Forum](#), there's a category for each project for you to discuss / raise questions

The discussion forum will be much more recommended than submitting the project to ask the reviewers. Please only submit when the project is completed.

Good luck with your next submission! 🍀
